

This document provides pertinent information concerning the reissuance of the VPDES Permit listed below. This permit is being processed as a major, industrial permit. The discharge results from the operation of a 0.2 MGD wastewater treatment plant and a 0.07 MGD reverse osmosis potable water treatment plant. This permit action consists of updating the proposed effluent limits to reflect the current Virginia WQS (effective 6 January 2011) and updating permit language as appropriate. The effluent limitations and special conditions contained within this permit will maintain the Water Quality Standards of 9VAC25-260 et seq.

10 **Wastewater Sources and Treatment Description**

Wastewater Treatment Plant

The Coffeewood Correctional Center STP is a 0.2 MGD Sequential Batch Reactor (SBR) treatment plant serving approximately 1,800 inmates and a population of about 100 from the Mitchells area.

Influent from the correctional center and residential homes flow via gravity to the treatment plant. Sewage travels through the preliminary treatment consisting of a mechanical bar rake and grit removal. After screening, wastewater is pumped to one of two sequencing batch reactor (SBR) units. Within the SBR unit, wastewater is mixed with sludge, aerated, settled and decanted for a pre-determined cycle of time. Effluent leaving the SBR unit flows to the filter feed well then to the sand filters. Disinfection is accomplished via UV units. The effluent is re-aerated prior to final discharge.

Water Treatment Plant

The discharge from Outfall 002 results from the operation of a reverse osmosis potable water treatment system. Groundwater is filtered through a permeable membrane and results in approximately 70,000 gallons per day of reject water, which is discharged from the system without additional treatment. Chlorination of the potable water occurs after treatment. There is no potential for chlorine to be found in the reject stream that is discharged.

This discharge has been unable to meet chronic toxicity limits, consistently. In 2002, the Department of Corrections entered an Executive Compliance Agreement (Amendment), allowing interim limits until such time the County of Culpeper could provide potable water to the facility. An agreement has been signed at the time of this Fact Sheet, however, no completion date has been set. Once the connection is complete, this plant will be taken offline, thus, discharge eliminated.

See Attachment 2 for the NPDES Permit Rating Worksheet

See Attachment 3 for a facility schematic/diagram

TABLE 1 OUTFALL DESCRIPTION				
Number	Discharge Sources	Treatment	Design/Max Flow	Latitude / Longitude
001	Domestic Wastewater	See Section 10 above	0.2 MGD	38° 21' 53" / 78° 01' 36"
002	Industrial Wastewater	See Section 10 above	0.07 MGD	38° 21' 53" / 78° 01' 36"

See Attachment 4 for the Rapidan topographic map

11 **Sludge Treatment and Disposal Methods**

Sludge is treated through aerobic digestion, dewatered using a plate filter press and land filled at the Shoosmith Brothers Sanitary Landfill in Chester, Virginia according to the permit application. The facility generates approximately 50 dry metric tons of sludge per year.

12 Discharges Located Within Waterbody VAN-E19R

TABLE 2 PERMITTED DISCHARGES			
Permit Number	Facility Name	Type	Receiving Stream
VA0092339	Rapidan Mill WWTP (not built)	Municipal Discharge Individual Permit	Rapidan River
VAG406459	Mian Residence	Small Municipal ≤ 1,000 gpd General Permit	Lick Run, UT

VAG250127	Saint Patrick's Church	Cooling Water General Permit	La Rogue Run

13 Material Storage

TABLE 3 MATERIAL STORAGE		
Materials Description	Maximum Amount Stored	Spill/Stormwater Prevention Measures
VITEC 3000 Antiscalent (polymer)	110 gallons	All chemicals are stored inside the water treatment plant except the hydrated lime which is stored in a 10' x 10' outbuilding
Sodium sulfite	100 pounds	
Calcium hypochlorite	500 pounds	
Ferric chloride	15 gallons	
Muriatic acid	15 gallons	
Sodium hypochlorite	165 gallons	
AQUAFEED 1025 Antiscalent (polymer)	110 gallons	
Citric acid	200 pounds	
NALCO 9909 dry polymer	200 pounds	
Hydrated lime	2000 pounds	
Alum (powered)	250 pounds	

14 **Site Inspection** Performed by DEQ-NRO Compliance Staff on 12 September 2012
See Attachment 5 for inspection summary

15 Receiving Stream Water Quality and Water Quality Standards

a Ambient Water Quality Data

This facility discharges to Cabin Branch, which flows into Cedar Run. There is no monitoring data for the receiving stream. The nearest downstream DEQ monitoring station is Station 3-CED000 59, located on Cedar Run at the Route 522 bridge crossing. Station 3-CED000 59 is located approximately 3.32 river miles downstream from Outfalls 001 and 002. The following is a summary for Station 3-CED000 59, as taken from the Draft* 2012 Integrated Assessment

Class III Section 4

DEQ ambient station 3-CED000 59 at Route 522 Citizen monitoring station 3CED-C2-SOS

The aquatic life and recreation uses are considered fully supporting. Citizen monitoring notes a high probability of adverse conditions for biota resulting in an observed effect for the aquatic life use. The fish consumption use was not assessed.

Note: No data was submitted for the 2012 assessment period to assess the wildlife use. Evaluation of the wildlife use from the previous assessment will be carried forward, including overall category and assessment documentation. According to Rule 8 of the 2012 Assessment Guidance Manual (11-2007), "fully supporting waters can only be carried forward as fully supporting for two additional reporting cycles with no new data." 2012 is the first assessment the wildlife use assessment is carried forward.

The wildlife use information from the 2010 assessment is as follows:
The wildlife use is considered fully supporting.

*Virginia's Draft 2012 Integrated Report (IR) has been through the public comment period and reviewed by EPA. The 2012 IR is currently awaiting final approval.

b. 303(d) Listed Stream Segments and Total Maximum Daily Loads (TMDLs)

TABLE 4 INFORMATION ON DOWNSTREAM 303(d) IMPAIRMENTS AND TMDLS						
Waterbody Name	Impaired Use	Cause	Distance From Outfall	TMDL completed	WLA	Basis for WEA
<i>Impairment Information in the Draft 2012 Integrated Report*</i>						
Cedar Run	Recreation	<i>E. Coli</i>	1.6 miles	Yes – 2007	3.48E+11 cfu/year	Max Design Flow of Outfall 001 (0.2 MGD) and <i>E. coli</i> criterion (126 cfu/100mL)

*Virginia's Draft 2012 Integrated Report (IR) has been through the public comment period and reviewed by EPA. The 2012 IR is currently awaiting final approval.

The full planning statement is found in **Attachment 6**.

c. Receiving Stream Water Quality Criteria

Part IX of 9VAC25-260(360-550) designates classes and special standards applicable to defined Virginia river basins and sections. The receiving stream, Cabin Branch, is located within Section 4 of the Rappahannock River Basin and classified as Class III water.

At all times, Class III waters must achieve a dissolved oxygen (D O) of 4.0 mg/L or greater, a daily average D O of 5.0 mg/L or greater, a temperature that does not exceed 32° C and maintain a pH of 6.0-9.0 standard units (S U).

Attachment 7a and **Attachment 7b** detail other water quality criteria applicable to the receiving stream for Outfall 001 and Outfall 002, respectively.

Ammonia

The fresh water, aquatic life Water Quality Criteria for ammonia is dependent on the instream pH and temperature. The critical 30Q10 flow of the receiving stream is 0.0 MGD. In cases such as this, effluent pH and temperature data may be used to establish the ammonia water quality standard. The 90th percentile pH values are used because they best represent the critical conditions of the receiving stream. Since effluent temperature data was not readily available, a default temperature value of 25° C for summer and an assumed value of 15° C for winter were utilized.

See **Attachment 8** for the derivation of the 90th percentile values of the effluent pH data from October 2008 to March 2013 and **Attachment 7a** and **Attachment 7b** for the subsequent Water Quality Criteria.

Metals Criteria

The Water Quality Criteria for some metals are dependent on the receiving stream and/or the effluent hardness values (expressed as mg/L calcium carbonate) However, there is no ambient data available since the critical 7Q10 flow of the receiving stream is zero The only hardness data for the facility is for Outfall 002, which is artificially elevated (refer to **Attachment 12**) due to the treatment process and is staff's opinion that it should not be utilized to calculate metal criteria Previous reissuances utilized hardness data collected at the monitoring station located at the Route 522 bridge on Cedar Run (see Section 15 a) It is staff's best professional judgement that the average value of 88.4 mg/L CaCO₃ used in the last reissuance is still indicative of current conditions and suitable for this criteria determination

Bacteria Criteria

The Virginia Water Quality Standards at 9VAC25-260-170 A state that the following criteria shall apply to protect primary recreational uses in surface waters

E. coli bacteria per 100 mL of water shall not exceed a monthly geometric mean of the following

	Geometric Mean ¹
Freshwater <i>E. coli</i> (N/100 mL)	126

¹For a minimum of four weekly samples taken during any calendar month

d Receiving Stream Special Standards

The State Water Control Board's Water Quality Standards, River Basin Section Tables (9VAC25-260-360, 370 and 380) designates the river basins, sections, classes and special standards for surface waters of the Commonwealth of Virginia The receiving stream, Cabin Branch, is located within Section 4 of the Rappahannock River Basin This section has not been designated with a special standard

e Threatened or Endangered Species

The Virginia DGIF Fish and Wildlife Information System Database was searched on 12 March 2013 for records to determine if there are threatened or endangered species in the vicinity of the discharge The following threatened species were identified within a 2 mile radius of the discharge upland sandpiper (song bird), loggerhead shrike (song bird), green floater (mussel), migrant loggerhead shrike (song bird) The limits proposed in this draft permit are protective of the Virginia Water Quality Standards and protect the threatened species found near the discharge

The stream that the facility discharges to is within a reach identified as having an Anadromous Fish Use It is staff's best professional judgment that the proposed limits are protective of this use

16 **Antidegradation (9VAC25-260-30)**

All state surface waters are provided one of three levels of antidegradation protection For Tier 1 or existing use protection, existing uses of the water body and the water quality to protect these uses must be maintained Tier 2 water bodies have water quality that is better than the water quality standards Significant lowering of the water quality of Tier 2 waters is not allowed without an evaluation of the economic and social impacts Tier 3 water bodies are exceptional waters and are so designated by regulatory amendment The antidegradation policy prohibits new or expanded discharges into exceptional waters

The receiving stream has been classified as Tier 1 based on the determination that the critical 7Q10, 30Q10 and 1Q10 flows for the stream are zero and at times the stream flow is comprised of only effluent It is staff's best professional judgment that such streams are Tier 1 Permit limits proposed have been established by determining wasteload allocations which will result in attaining and/or maintaining all water quality criteria which apply to the receiving stream, including narrative criteria These wasteload allocations will provide for the protection and maintenance of all existing uses

17 **Effluent Screening, Wasteload Allocation and Effluent Limitation Development**

To determine water quality-based effluent limitations for a discharge, the suitability of data must first be determined Data is suitable for analysis if one or more representative data points are equal to or above the quantification level ("QL") and the data represent the exact pollutant being evaluated

Next, the appropriate Water Quality Standards (WQS) are determined for the pollutants in the effluent. Then, the Wasteload Allocations (WLAs) are calculated. In this case since the critical flows 7Q10 and 1Q10 have been determined to be zero, the WLAs are equal to the WQS. The WLA values are then compared with available effluent data to determine the need for effluent limitations. Effluent limitations are needed if the 97th percentile of the daily effluent concentration values is greater than the acute wasteload allocation or if the 97th percentile of the four-day average effluent concentration values is greater than the chronic wasteload allocation. Effluent limitations are based on the most limiting WLA, the required sampling frequency and statistical characteristics of the effluent data.

a Effluent Screening

Effluent data obtained from the permit application and October 2008 -- March 2013 Discharge Monitoring Reports has been reviewed and determined to be suitable for evaluation.

Please see **Attachment 8** for a summary of effluent data.

b Mixing Zones and Wasteload Allocations (WLAs)

Wasteload allocations (WLAs) are calculated for those parameters in the effluent with the reasonable potential to cause an exceedance of water quality criteria. The basic calculation for establishing a WLA is the steady state complete mix equation:

$$WLA = \frac{C_o [Q_e + (f) (Q_s)] - [(C_s) (f) (Q_s)]}{Q_e}$$

- Where
- WLA = Wasteload allocation
 - C_o = In-stream water quality criteria
 - Q_e = Design flow
 - Q_s = Critical receiving stream flow
(1Q10 for acute aquatic life criteria, 7Q10 for chronic aquatic life criteria, harmonic mean for carcinogen/human health criteria, 30Q10 for ammonia criteria, and 30Q5 for non-carcinogen/human health criteria)
 - f = Decimal fraction of critical flow
 - C_s = Mean background concentration of parameter in the receiving stream

The water segment receiving the discharge via Outfall 001 and Outfall 002 is considered to have a 7Q10, 30Q10 and 1Q10 of 0.0 MGD. As such, there is no mixing zone and the WLA is equal to the C_o.

c Effluent Limitations and Monitoring – Toxic Pollutants

9VAC25-31-220 D requires limits be imposed where a discharge has a reasonable potential to cause or contribute to an in-stream excursion of water quality criteria. Those parameters with WLAs that are near effluent concentrations are evaluated for limits.

The VPDES Permit Regulation at 9VAC25-31-230 D requires that monthly and weekly average limitations be imposed for continuous discharges from POTWs and monthly average and daily maximum limitations be imposed for all other continuous non-POTW discharges.

Outfall 001

1) Ammonia as N/TKN

Staff reevaluated pH and temperature and has concluded it is not significantly different than what was used previously to derive ammonia criteria. Current DEQ guidance recommends utilizing a sole data point of 9.0 mg/L to ensure the evaluation adequately addresses the potential for ammonia to be present in discharges containing domestic sewage.

The toxicity of ammonia is dependent on the pH of the effluent and/or receiving stream. Ammonia can exist as both "ionized ammonia" (NH₄) and "un-ionized ammonia" (NH₃). Research has shown that the un-ionized ammonia is the fraction that is toxic to aquatic life while the ionized ammonia has been found to have little or no toxic effect. Furthermore, it has been demonstrated that the un-ionized fraction increases correspondingly with rising pH values, thus, increasing potential toxicity and the basis for the above calculated ammonia limits.

It is generally accepted that Total Kjeldahl Nitrogen (TKN) consists of approximately 60% ammonia in raw wastewater. As the waste stream is treated, the ammonia component of TKN is converted to Nitrate (NO₃) and Nitrite (NO₂). It is estimated that a facility achieving a TKN limit of 3.0 mg/L essentially removes ammonia from the waste stream, resulting in a 'self-sustaining' quality effluent that protects against ammonia toxicity.

It is staff's best professional judgement that a TKN monthly average limit of 3.0 mg/L is still protective given the aforementioned and will be carried forward in this reissuance. The weekly average limit will be 4.5 mg/L based on a multiplier of 1.5 times the monthly average.

2) Total Residual Chlorine

Chlorine is not utilized for disinfection, therefore, total residual chlorine limitations are not warranted.

3) Metals/Organics

Limit determinations were completed for Copper and Zinc. See Attachment 9 for the limit derivations. Data indicated that the current copper limit would remain at 12 µg/L while there was no limit required for zinc. However, due to antibacksliding provisions, the current zinc limit of 79 µg/L will be carried forward with this reissuance.

d Effluent Limitations and Monitoring – Conventional and Non-Conventional Pollutants

Outfall 001

No changes to dissolved oxygen (D O), carbonaceous-biochemical oxygen demand-5 day (cBOD₅), total suspended solids (TSS), total kjeldahl nitrogen (TKN) and pH limitations are proposed.

Dissolved oxygen, cBOD₅ and TKN limitations are based on the stream modeling conducted in September 1992 (Attachment 10) and are set to meet the water quality criteria for dissolved oxygen in the receiving stream.

It is staff's practice to equate the total suspended solids limits with the cBOD₅ limits since the two pollutants are closely related in terms of treatment of domestic sewage.

pH limitations are set at the water quality criteria.

E. coli limitations are in accordance with the Water Quality Standards 9VAC25-260-170.

Outfall 002

No changes to dissolved oxygen (D O) and pH limitations are proposed.

The total dissolved solids (TDS) limitation was based on data and demonstrations provided by the Department of Corrections. It was shown that precipitation of the dissolved solids is unlikely and that the elevated levels of dissolved solids would not affect the palatability of the receiving stream for downstream livestock. There are no Water Quality Standards for aquatic life. See Attachment 11 for 1974 National Academy of Sciences publication excerpt regarding livestock use.

pH limitations are set at the Water Quality Criteria.

e Effluent Limitations and Monitoring Summary

The effluent limitations are presented in the following table. Limits were established for cBOD₅, total suspended solids, total kjeldahl nitrogen, pH, dissolved oxygen, total recoverable zinc, total recoverable copper, total dissolved solids, whole effluent toxicity and *E. coli*.

The mass loading (kg/d) for BOD₅ and TSS monthly and weekly averages were calculated by multiplying the concentration values (mg/L), with the flow values (in MGD) and then by a conversion factor of 3.785. Sample types are in accordance with the recommendations in the VPDES Permit Manual.

The permittee requested a reduction in the monitoring frequency for the parameters total suspended solids and cBOD₅ upon submission of the reissuance application. Staff evaluated the previous three years of effluent data, per agency guidance, and found no exceedances of the limitations. Therefore, a reduction in monitoring frequency was included with this reissuance for this permit term.

See Section 24 for further details.

The VPDES Permit Regulation at 9VAC25-31-30 and 40 CFR Part 133 require that the facility achieve at least 85% removal for BOD/cBOD and TSS (or 65% for equivalent to secondary). The limits at Outfall 001 in this permit are water quality-based effluent limits and result in greater than 85% removal.

18 Antibacksliding

All limits in this permit are at least as stringent as those previously established. Backsliding does not apply to this reissuance.

19a Effluent Limitations/Monitoring Requirements for Outfall 001

Design flow is 0.2 MGD

Effective Dates During the period beginning with the permit's effective date and lasting until the expiration date

PARAMETER	BASIS FOR LIMITS	DISCHARGE LIMITATIONS				MONITORING REQUIREMENTS	
		Monthly Average	Weekly Average	Minimum	Maximum	Frequency	Sample Type
Flow (MGD)	NA	NL	NA	NA	NL	Continuous	TIRE
pH	3	NA	NA	6.0 S U	9.0 S U	1/D	Grab
cBOD ₅	2,4	10 mg/L 7.6 kg/day	15 mg/L 11 kg/day	NA	NA	1/W ^(b)	8H C
Total Suspended Solids (TSS)	2	10 mg/L 7.6 kg/day	15 mg/L 11 kg/day	NA	NA	1/W ^(b)	8H-C
Dissolved Oxygen (DO)	3,4	NA	NA	6.0 mg/L	NA	1/D	Grab
Total Kjeldahl Nitrogen (TKN)	3,4	3.0 mg/L 2.3 kg/day	4.5 mg/L 3.4 kg/day	NA	NA	1/W ^(b)	8H C
<i>E. coli</i> (Geometric Mean) ^(a)	3,5	126 n/100mL	NA	NA	NA	1/W ^(b)	Grab

Zinc Total Recoverable	3	79 µg/L	79 µg/L	NA	NA	1/M	Grab

The basis for the limitations codes are

- | | | |
|---------------------------------|--|------------------------|
| 1 Federal Effluent Requirements | MGD = Million gallons per day | I/D = Once every day |
| 2 Best Professional Judgement | NA = Not applicable | I/W = Once every week |
| 3 Water Quality Standards | NL = No limit monitor and report | I/M = Once every month |
| 4 Stream Model – Attachment 10 | S U = Standard units | |
| 5 Rapidan River Basin TMDL | TIRE = Totalizing indicating and recording equipment | |

8H C = A flow proportional composite sample collected manually or automatically and discretely or continuously for the entire discharge of the monitored 8 hour period. Where discrete sampling is employed the permittee shall collect a minimum of eight (8) aliquots for compositing. Discrete sampling may be flow proportioned either by varying the time interval between each aliquot or the volume of each aliquot. Time composite samples consisting of a minimum eight (8) grab samples obtained at hourly or smaller intervals may be collected where the permittee demonstrates that the discharge flow rate (gallons per minute) does not vary by 10% or more during the monitored discharge.

Grab = An individual sample collected over a period of time not to exceed 15 minutes

^(a) Samples shall be collected between the hours of 10 A M and 4 P M

^(b) See Section 24 of this Fact Sheet

19b Effluent Limitations/Monitoring Requirements for Outfall 002

Design flow is 0.07 MGD

Effective Dates During the period beginning with the permit's effective date and lasting until the expiration date

PARAMETER	BASIS FOR LIMITS	DISCHARGE LIMITATIONS				MONITORING REQUIREMENTS	
		Monthly Average	Daily Maximum	Minimum	Maximum	Frequency	Sample Type
Flow (MGD)	NA	NL	NA	NA	NL	1/M	Estimate
pH	3	NA	NA	6.0 S U	9.0 S U	1/M	Grab
Total Dissolved Solids (TDS)	2,4	NA	NA	NA	5000 mg/L 1300 kg/day	1/M	5G/8H C
Chronic Toxicity – <i>C. dubia</i>		NA	NA	NA	1.44 TU _c	1/Y	5G/8H C

The basis for the limitations codes are

- | | | |
|--|----------------------------------|--------------------------------|
| 1 Federal Effluent Requirements | MGD = Million gallons per day | I/M = Once every month |
| 2 Best Professional Judgement | NA = Not applicable | I/Y = Once every calendar year |
| 3 Water Quality Standards | NL = No limit monitor and report | |
| 4 1974 National Academy of Science – Attachment 11 | S U = Standard units | |

5G/8H C = A composite sample consisting of a minimum of five (5) grab samples collected at hourly intervals until the discharge ceases or if the discharge is less than eight (8) hours in duration a minimum of five (5) grab samples collected at evenly spaced intervals during the duration of the discharge

Estimate = Reported flow is to be based on the technical evaluation of the sources contributing to the discharge

Grab = An individual sample collected over a period of time not to exceed 15 minutes

20 Other Permit Requirements

a Part I B of the permit contains quantification levels and compliance reporting instructions

9VAC25-31-190 L 4 c requires an arithmetic mean for measurement averaging and 9VAC25-31-220 D requires limits be imposed where a discharge has a reasonable potential to cause or contribute to an in-stream excursion of water quality criteria. Specific analytical methodologies for toxics are listed in this permit section as well as quantification levels (QLs) necessary to demonstrate compliance with applicable permit limitations or for use in future evaluations to determine if the pollutant has reasonable potential to cause or contribute to a violation. Required averaging methodologies are also specified.

b Part I C of the permit details the requirements for Whole Effluent Toxicity Program

The VPDES Permit Regulation at 9VAC25-31-210 requires monitoring and 9VAC25-31-220 I, requires limitations in the permit to provide for and assure compliance with all applicable requirements of the State Water Control Law and the Clean Water Act. A WET Program is imposed for facilities determined by the Board based on effluent variability, compliance history, IWC and receiving stream characteristics. This facility was given a WET limit in 1999 based on toxicity findings at Outfall 002. Based on the variability of this effluent, it is staff's best professional judgement that the WET requirements remain until such time the discharge ceases (See Section 10).

See Attachment 12 for a summary of test results

21 Other Special Conditions

- a 95% Capacity Reopener The VPDES Permit Regulation at 9VAC25-31-200 B 4 requires all POTWs and PVOTWs develop and submit a plan of action to DEQ when the monthly average influent flow to their sewage treatment plant reaches 95% or more of the design capacity authorized in the permit for each month of any three consecutive month period. This facility is a POTW.
- b Indirect Dischargers Required by VPDES Permit Regulation, 9VAC25-31-200 B 1 and B 2 for POTWs and PVOTWs that receive waste from someone other than the owner of the treatment works.
- c O&M Manual Requirement Required by Code of Virginia §62 1-44 19, Sewage Collection and Treatment Regulations, 9VAC25-790, VPDES Permit Regulation, 9VAC25-31-190 E. The permittee shall maintain a current Operations and Maintenance (O&M) Manual. The permittee shall operate the treatment works in accordance with the O&M Manual and shall make the O&M Manual available to Department personnel for review upon request. Any changes in the practices and procedures followed by the permittee shall be documented in the O&M Manual within 90 days of the effective date of the changes. Non-compliance with the O&M Manual shall be deemed a violation of the permit.
- d CTC, CTO Requirement The Code of Virginia § 62 1-44 19, Sewage Collection and Treatment Regulations, 9VAC25-790 requires that all treatment works treating wastewater obtain a Certificate to Construct prior to commencing construction and to obtain a Certificate to Operate prior to commencing operation of the treatment works.
- e Licensed Operator Requirement The Code of Virginia at §54 1-2300 et seq and the VPDES Permit Regulation at 9VAC25-31-200 C, and Rules and Regulations for Waterworks and Wastewater Works Operators (18VAC160-20-10 et seq) requires licensure of operators. This facility requires a Class II operator.
- f Reliability Class The Sewage Collection and Treatment Regulations at 9VAC25-790 require sewage treatment works to achieve a certain level of reliability in order to protect water quality and public health consequences in the event of component or system failure. Reliability means a measure of the ability of the treatment works to perform its designated function without failure or interruption of service. The facility is required to meet a reliability Class of I.
- g Sludge Reopener The VPDES Permit Regulation at 9VAC25-31-220 C requires all permits issued to treatment works treating domestic sewage (including sludge-only facilities) include a reopener clause allowing incorporation of any applicable standard for sewage sludge use or disposal promulgated under Section 405(d) of the CWA. The facility includes a sewage treatment works.
- h Sludge Use and Disposal The VPDES Permit Regulation at 9VAC25-31-100 P, 220 B 2, and 420 through 720 and 40 CFR Part 503 require all treatment works treating domestic sewage to submit information on their sludge use and disposal practices and to meet specified standards for sludge use and disposal. The facility includes a treatment works treating domestic sewage.
- i Materials Handling/Storage 9 VAC 25-31-50 A prohibits the discharge of any wastes into State waters unless authorized by permit. Code of Virginia §62 1-44 16 and §62 1-44 17 authorize the Board to regulate the discharge of industrial waste or other waste.

Persons may comment in writing or by email to the DEQ on the proposed permit action, and may request a public hearing, during the comment period. Comments shall include the name, address, and telephone number of the writer and of all persons represented by the commenter/requester, and shall contain a complete, concise statement of the factual basis for comments. Only those comments received within this period will be considered. The DEQ may decide to hold a public hearing, including another comment period, if public response is significant and there are substantial, disputed issues relevant to the permit. Requests for public hearings shall state 1) the reason why a hearing is requested, 2) a brief, informal statement regarding the nature and extent of the interest of the requester or of those represented by the requester, including how and to what extent such interest would be directly and adversely affected by the permit, and 3) specific references, where possible, to terms and conditions of the permit with suggested revisions. Following the comment period, the Board will make a determination regarding the proposed permit action. This determination will become effective, unless the DEQ grants a public hearing. Due notice of any public hearing will be given. The public may request an electronic copy of the draft permit and fact sheet or review the draft permit and application at the DEQ Northern Regional Office by appointment.

26 Additional Comments

Previous Board Action(s) On 19 June 2002, the DEQ and the Department of Corrections entered an Executive Compliance Agreement (Amendment). This agreement provided a Schedule of Compliance for the facility in order to achieve permitted limits for Outfall 001 and Outfall 002. The permittee was granted interim limits for Copper and Zinc for Outfall 001 and a WET limit for Outfall 002 until such time compliance is achieved. As of the date of this Fact Sheet, an agreement between the DOC and the County of Culpeper was being drafted in order to provide public water to the correctional center, thus, eliminating the discharge from Outfall 002.

See **Attachment 14** for a copy of the Executive Compliance Agreement.

Staff Comments No comments were received.

Public Comment No comments were received during the public notice.

EPA Checklist The checklist can be found in **Attachment 15**.

MEMORANDUM

DEPARTMENT OF ENVIRONMENTAL QUALITY - WATER DIVISION
Water Quality Assessments and Planning
629 E. Main Street P.O. Box 10009 Richmond, Virginia 23240

SUBJECT: Flow Frequency Determination
Coffeewood Correctional Center - #VA0087718

TO: James Olson, NRO

FROM: Paul E Herman, P.E., WQAP

DATE: December 12, 1997

COPIES: Ron Gregory, Charles Martin, File

This memo supercedes Ed Morrow's memo to Jennie Dollard dated August 5, 1992 concerning the subject facility.

The Coffeewood Correctional Center discharges to the Cabin Branch near Culpeper, VA Stream flow frequencies are required at this site by the permit writer for the purpose of calculating effluent limitations for the VPDES permit.

The USGS conducted several flow measurements on the Cedar Run from 1951 to 1954 and from 1979 to 1981. The measurements were made at the Route 522 bridge near Culpeper, VA. The low flow/base flow measurements made by the USGS correlated very well with the same day daily mean values from the continuous record gage on the Mountain Run near Culpeper, VA #01665000. The measurements and daily mean values were plotted on a logarithmic graph and a best fit line was drawn through the data points. The required flow frequencies from the reference gage were plotted on the regression line and the associated flow frequencies at the measurement site were determined from the graph.

The flow frequencies at the discharge point were determined by using the values at the measurement site and adjusting them by proportional drainage areas. The data for the reference gage, the measurement site and the discharge point are presented below.

Mountain Run near Culpeper, VA (#01665000):

Drainage Area = 15.9 mi²
1Q10 = 0.45 cfs High Flow 1Q10 = 2.8 cfs
7Q10 = 0.60 cfs High Flow 7Q10 = 3.7 cfs
30Q5 = 1.5 cfs HM = 5.4 cfs

Cedar Run at Rt 522 near Culpeper, VA (#01667650):

Drainage Area = 28.07 mi²
1Q10 = 0.0 cfs High Flow 1Q10 = 0.12 cfs
7Q10 = 0.0 cfs High Flow 7Q10 = 0.24 cfs

30Q5 = 0.0 cfs

HM = 0.0 cfs

Cabin Branch at discharge point:

Drainage Area = 3.49 mi²

1Q10 = 0.0 cfs

High Flow 1Q10 = 0.015 cfs

7Q10 = 0.0 cfs

High Flow 7Q10 = 0.030 cfs

30Q5 = 0.0 cfs

HM = 0.0 cfs

The high flow months are December through April.

This analysis assumes there are no significant discharges, withdrawals or springs influencing the flow in the Cabin Branch upstream of the discharge point

If there are any questions concerning this analysis, please let me know.

Conversion of CFS to MGD using the conversion factor 0.6463

High Flow 1Q10 = 0.015 cfs x 0.6463 = 0.0096945 MGD

High Flow 7Q10 = 0.030 cfs x 0.6463 = 0.019389 MGD

NPDES PERMIT RATING WORK SHEET

VPDES NO VA0087718

Facility Name Coffeewood Correctional Center

City / County Mitchells / Culpeper County

Receiving Water Cabin Branch

Waterbody ID VAN-E19R

Is this facility a steam electric power plant (sic =4911) with one or more of the following characteristics?

- 1 Power output 500 MW or greater (not using a cooling pond/lake)
- 2 A nuclear power Plant
- 3 Cooling water discharge greater than 25% of the receiving stream's 7Q10 flow rate

Is this permit for a municipal separate storm sewer serving a population greater than 100 000?

- YES score is 700 (stop here)
- NO (continue)

Yes score is 600 (stop here) NO (continue)

FACTOR 1 Toxic Pollutant Potential

PCS SIC Code _____ Primary Sic Code 4941 Other Sic Codes _____

Industrial Subcategory Code 000 (Code 000 if no subcategory)

Determine the Toxicity potential from Appendix A Be sure to use the TOTAL toxicity potential column and check one)

Toxicity Group	Code	Points	Toxicity Group	Code	Points	Toxicity Group	Code	Points
<input type="checkbox"/> No process waste streams	0	0	<input type="checkbox"/> 3	3	15	<input checked="" type="checkbox"/> 7	7	35
<input type="checkbox"/> 1	1	5	<input type="checkbox"/> 4	4	20	<input type="checkbox"/> 8	8	40

FACTOR 3 Conventional Pollutants

(only when limited by the permit)

A Oxygen Demanding Pollutants (check one) BOD COD Other _____

Permit Limits (check one)

<input type="checkbox"/>	< 100 lbs/day	1	0
<input type="checkbox"/>	100 to 1000 lbs/day	2	5
<input type="checkbox"/>	> 1000 to 3000 lbs/day	3	15
<input type="checkbox"/>	> 3000 lbs/day	4	20

Code Number Checked NA
Points Scored 0

B Total Suspended Solids (TSS)

Permit Limits (check one)

<input type="checkbox"/>	< 100 lbs/day	1	0
<input type="checkbox"/>	100 to 1000 lbs/day	2	5
<input type="checkbox"/>	> 1000 to 5000 lbs/day	3	15
<input type="checkbox"/>	> 5000 lbs/day	4	20

Code Number Checked NA
Points Scored 0

C Nitrogen Pollutants (check one) Ammonia Other _____

Permit Limits (check one)

	<i>Nitrogen Equivalent</i>	Code	Points
<input type="checkbox"/>	< 300 lbs/day	1	0
<input type="checkbox"/>	300 to 1000 lbs/day	2	5
<input type="checkbox"/>	> 1000 to 3000 lbs/day	3	15
<input type="checkbox"/>	> 3000 lbs/day	4	20

Code Number Checked NA
Points Scored 0
Total Points Factor 3 0

FACTOR 4 Public Health Impact

Is there a public drinking water supply located within 50 miles downstream of the effluent discharge (this include any body of water to which the receiving water is a tributary)? A public drinking water supply may include infiltration galleries or other methods of conveyance that ultimately get water from the above reference supply

YES (If yes check toxicity potential number below)

NO (If no go to Factor 5)

Determine the *Human Health* potential from Appendix A Use the same SIC doe and subcategory reference as in Factor 1 (Be sure to use the *Human Health* toxicity group column – check one below)

Toxicity Group	Code	Points	Toxicity Group	Code	Points	Toxicity Group	Code	Points
<input type="checkbox"/> No process waste streams	0	0	<input type="checkbox"/> 3	3	0	<input checked="" type="checkbox"/> 7	7	15
<input type="checkbox"/> 1	1	0	<input type="checkbox"/> 4	4	0	<input type="checkbox"/> 8	8	20
<input type="checkbox"/> 2	2	0	<input type="checkbox"/> 5	5	5	<input type="checkbox"/> 9	9	25
			<input type="checkbox"/> 6	6	10	<input type="checkbox"/> 10	10	30

Code Number Checked 7
Total Points Factor 4 15

NPDES PERMIT RATING WORK SHEET

FACTOR 5 Water Quality Factors

Is (or will) one or more of the effluent discharge limits based on water quality factors of the receiving stream (rather than technology-base federal effluent guidelines or technology-base state effluent guidelines) or has a wasteload allocation been assigned to the discharge?

<input type="checkbox"/>	YES	Code	1	Points	10
<input checked="" type="checkbox"/>	NO		2		0

Is the receiving water in compliance with applicable water quality standards for pollutants that are water quality limited in the permit?

<input checked="" type="checkbox"/>	YES	Code	1	Points	0
<input type="checkbox"/>	NO		2		5

Does the effluent discharged from this facility exhibit the reasonable potential to violate water quality standards due to whole effluent toxicity?

<input checked="" type="checkbox"/>	YES	Code	1	Points	10
<input type="checkbox"/>	NO		2		0

Code Number Checked A 2 B 1 C 1
 Points Factor 5 A 0 + B 0 + C 10 = 20

FACTOR 6 Proximity to Near Coastal Waters

A Base Score Enter flow code here (from factor 2) 21

Check appropriate facility HPRI code (from PCS)

HPRI#	Code	HPRI Score
<input type="checkbox"/> 1	1	20
<input type="checkbox"/> 2	2	0
<input type="checkbox"/> 3	3	30
<input checked="" type="checkbox"/> 4	4	0
<input type="checkbox"/> 5	5	20

Enter the multiplication factor that corresponds to the flow code 0 10

Flow Code	Multiplication Factor
11 31 or 41	0 00
12 32 or 42	0 05
13 33 or 43	0 10
14 or 34	0 15
21 or 51	0 10
22 or 52	0 30
23 or 53	0 60
24	1 00

HPRI code checked 4

Base Score (HPRI Score) 0 X (Multiplication Factor) 0 10 = 0

B Additional Points – NEP Program

For a facility that has an HPRI code of 3 does the facility discharge to one of the estuaries enrolled in the National Estuary Protection (NEP) program (see instructions) or the Chesapeake Bay?

<input type="checkbox"/>	Code	Points
<input type="checkbox"/>	1	10
<input type="checkbox"/>	2	0

C Additional Points – Great Lakes Area of Concern

For a facility that has an HPRI code of 5 does the facility discharge any of the pollutants of concern into one of the Great Lakes 31 areas of concern (see instructions)?

<input type="checkbox"/>	Code	Points
<input type="checkbox"/>	1	10
<input type="checkbox"/>	2	0

Code Number Checked A 4 B NA C NA
 Points Factor 6 A 0 + B 0 + C 0 = 0

SUMMARY 9/12/12 INSPECTION

Comments

The facility is still trying to get a water line from Culpeper County but nothing to date is in the planning

Staff at the Coffeewood WWTP have done an excellent job on operating and maintaining the Wastewater Treatment System

Outfall 001 – Treatment plant discharge

Outfall 002 – RO system discharge

REQUEST for CORRECTIVE ACTION

No deficiencies or issues identified at this inspection

To	Douglas Frasier
From	Katie Conaway
Date	March 22, 2013
Subject	Planning Statement for DOC – Coffeewood Correctional Center
Permit Number	VA0087718

Information for Outfall 001/002

Discharge Type	Industrial, Major
Discharge Flow	001 – Domestic Wastewater 0.2 MGD 002 – Industrial Wastewater 0.07 MGD (WTP reject water)
Receiving Stream	Cabin Branch
Latitude / Longitude	001 38° 21' 53" / -78° 01' 36" 002 38° 21' 53" / -78° 01' 36"
Rivermile	1.54
Streamcode	3-CAB
Waterbody	VAN-E16R
Water Quality Standards	Class III, Section 4
Drainage Area	3.49 mi ²

- 1 Please provide water quality monitoring information for the receiving stream segment. If there is not monitoring information for the receiving stream segment, please provide information on the nearest downstream monitoring station, including how far downstream the monitoring station is from the outfall.

This facility discharges to Cabin Branch, which flows into Cedar Run. There is no monitoring data for the receiving stream. The nearest downstream DEQ monitoring station is Station 3-CED000 59, located on Cedar Run at the Route 522 bridge crossing. Station 3-CED000 59 is located approximately 3.32 rivermiles downstream from Outfalls 001 and 002. The following is a summary for Station 3-CED000 59, as taken from the Draft* 2012 Integrated Assessment.

Class III, Section 4

DEQ ambient station 3-CED000 59, at Route 522. Citizen monitoring station 3CED-C2-SOS

The aquatic life and recreation uses are considered fully supporting. Citizen monitoring notes a high probability of adverse conditions for biota, resulting in an observed effect for the aquatic life use. The fish consumption use was not assessed.

Note: No data was submitted for the 2012 assessment period to assess the wildlife use. Evaluation of the wildlife use from the previous assessment will be carried forward, including overall category and assessment documentation. According to Rule 8 of the 2012 Assessment Guidance Manual (11-2007), "fully supporting waters can only be carried forward as fully supporting for two additional reporting cycles with no new data." 2012 is the first assessment the wildlife use assessment is carried forward.

*The wildlife use information from the 2010 assessment is as follows:
The wildlife use is considered fully supporting.*

* Virginia's Draft 2012 Integrated Report (IR) has been through the public comment period and reviewed by EPA. The 2012 IR is currently awaiting final approval.

2 Does this facility discharge to a stream segment on the 303(d) list? If yes, please fill out Table A

No

3 Are there any downstream 303(d) listed impairments that are relevant to this discharge? If yes, please fill out Table B

Table B Information on Downstream 303(d) Impairments and TMDLs

Waterbody Name	Impaired Use	Cause	Distance From Outfall	TMDL completed	WLA	Basis for WLA	TMDL Schedule
<i>Impairment Information in the Draft 2012 Integrated Report*</i>							
Cedar Run	Recreation	<i>E Coli Bacteria</i>	1.6 miles	2007	3.48E+11 cfu/year	Max Design Flow of Outfall 001 (0.2 MGD) and <i>e Coli</i> criterion (126 cfu/100mL)	Completed 2007

* Virginia's Draft 2012 Integrated Report (IR) has been through the public comment period and reviewed by EPA. The 2012 IR is currently awaiting final approval.

4 Is there monitoring or other conditions that Planning/Assessment needs in the permit?

There is a completed downstream TMDL for the aquatic life use impairment for the Chesapeake Bay. However, the Bay TMDL and the WLAs contained within the TMDL are not addressed in this planning statement.

5 Fact Sheet Requirements – Please provide information regarding any drinking water intakes located within a 5 mile radius of the discharge point.

There are no public water supply intakes located within 5 miles of this discharge.

Notes

- All concentrations expressed as micrograms/liter (ug/l) unless noted otherwise
- Discharge flow is highest monthly average or Form 2C maximum for Industries and design flow for Municipals
- Metals measured as Dissolved unless specified otherwise
- C indicates a carcinogenic parameter
- Regular WLAs are mass balances (minus background concentration) using the % of stream flow entered above under Mixing Information
Antidegradation WLAs are based upon a complete mix
- Antideg Baseline = (0.25(WQC - background conc) + background conc) for acute and chronic
= (0.1(WQC - background conc) + background conc) for human health
- WLAs established at the following stream flows: 1Q10 for Acute, 30Q10 for Chronic Ammonia, 7Q10 for Other Chronic, 30Q5 for Non-carcinogens and Harmonic Mean for Carcinogens. To apply mixing ratios from a model set the stream flow equal to (mixing ratio - 1) effluent flow equal to 1 and 100 % mix

Metal	Target Value (SSTV)
Antimony	6.4E+02
Arsenic	9.0E+01
Barium	na
Cadmium	6.2E-01
Chromium III	4.0E+01
Chromium VI	6.4E+00
Copper	4.8E+00

Notes

- All concentrations expressed as micrograms/liter (ug/l) unless noted otherwise
- Discharge flow is highest monthly average or Form 2C maximum for Industries and design flow for Municipals
- Metals measured as Dissolved unless specified otherwise
- C indicates a carcinogenic parameter
- Regular WLAs are mass balances (minus background concentration) using the % of stream flow entered above under Mixing Information
Antidegradation WLAs are based upon a complete mix
- Antideg. Baseline = (0.25(WQC - background conc) + background conc) for acute and chronic
= (0.1(WQC - background conc) + background conc) for human health
- WLAs established at the following stream flows: 1Q10 for Acute, 3Q10 for Chronic, Ammonia 7Q10 for Other Chronic, 3Q5 for Non-carcinogens and Harmonic Mean for Carcinogens. To apply mixing ratios from a model set the stream flow equal to (mixing ratio - 1) effluent flow equal to 1 and 100% mix

Metal	Target Value (SSTV)
Antimony	6.4E+02
Arsenic	9.0E+01
Barium	na
Cadmium	6.2E-01
Chromium III	4.0E+01

DATA FILE SUMMARY

THE NAME OF THE DATA FILE IS MSDIV MOD

THE STREAM NAME IS Cabin Branch
 THE RIVER BASIN IS Rappahannock River
 THE SECTION NUMBER IS 4
 THE CLASSIFICATION IS III

STANDARDS VIOLATED (Y/N) = N
 STANDARDS APPROPRIATE (Y/N) = Y

DISCHARGE WITHIN 3 MILES (Y/N) = N

THE DISCHARGE BEING MODELED IS Medium Security Dormitory IV

PROPOSED LIMITS ARE

FLOW = 2 MGD
 BOD5 = 10 MG/L
 TKN = 6 MG/L
 D O = 6 MG/L

THE NUMBER OF SEGMENTS TO BE MODELED = 3

7Q10 WILL BE CALCULATED BY DRAINAGE AREA COMPARISON

THE GAUGE NAME IS Cedar Run near Culpeper (#01667650)
 GAUGE DRAINAGE AREA = 33.2 SQ MI
 GAUGE 7Q10 = 0 MGD
 DRAINAGE AREA AT DISCHARGE = 4.54 SQ MI

STREAM A DRY DITCH AT DISCHARGE (Y/N) = ~~Y~~ N
 ANTIDegradation APPLIES (Y/N) = N

ALLOCATION DESIGN TEMPERATURE = 25 °C

There is a small sewage discharge (500 gpd) approximately 1500 feet upstream of the discharge. This is < 0.5% of the flow volume of the proposed discharge and was not considered further. A minor industrial discharge also enters Cabin Branch upstream but does not contribute significant BOD and TKN loads.

Anti-degradation does not apply to the first two stream segments modeled. Since the 7Q10 is zero, Anti-degradation does apply to the last segment, the Rapidan River. Water quality standards are applicable within each stream segment modeled.

SEGMENT INFORMATION

SEGMENT # 1 ##### CABIN BRANCH

SEGMENT ENDS BECAUSE A TRIBUTARY ENTERS AT END

SEGMENT LENGTH = 1.8 MI

SEGMENT WIDTH = 2.5 FT

SEGMENT DEPTH = 5 FT

SEGMENT VELOCITY = 2 FT/SEC

DRAINAGE AREA AT SEGMENT START = 4.54 SQ MI

DRAINAGE AREA AT SEGMENT END = 5.76 SQ MI

ELEVATION AT UPSTREAM END = 300 FT

ELEVATION AT DOWNSTREAM END = 280 FT

THE CROSS SECTION IS RECTANGULAR

THE CHANNEL IS MOSTLY STRAIGHT

POOLS AND RIFFLES (Y/N) = Y

THE SEGMENT LENGTH IS 10 % POOLS

POOL DEPTH = 1 FT

THE SEGMENT LENGTH IS 90 % RIFFLES

RIFFLE DEPTH = 4 FT

THE BOTTOM TYPE = SMALL ROCK

SLUDGE DEPOSITS = NONE

AQUATIC PLANTS = LIGHT

ALGAE OBSERVED = NONE

WATER COLORED GREEN (Y/N) = N

TRIBUTARY DATA

FLOW = 0 MGD

BOD5 = 2 MG/L

TKN = 0 MG/L

D.O. = 7.4255 MG/L

(≤ 1000 gpd)
Another small sewage plant discharges into Cedar Run above the confluence with Cabin Branch, however it is > 1 mile upstream of the confluence and is not expected to contribute significant flow or pollutant load in the section of Cedar Run below Cabin Branch.

SEGMENT INFORMATION

SEGMENT # 2 ##### CEDAR RUN

SEGMENT ENDS BECAUSE A TRIBUTARY ENTERS AT END

SEGMENT LENGTH = 2.1 MI

SEGMENT WIDTH = 4 FT

SEGMENT DEPTH = 3 FT

SEGMENT VELOCITY = 3 FT/SEC

not be as available as those in solution to animals drinking the water.

Determinations of the concentration values of most mineral elements in surface waters of the United States during the period 1957-1969 were accumulated in STORET (Systems for Technical Data, 1971). These data include values for the mean, maximum, and minimum concentrations of the nutrient elements (see Table 8). The values obviously include many samples from calcium-magnesium sulfate-chloride and sodium-potassium sulfate-chloride types of water, as well as the more common calcium-magnesium carbonate-bicarbonate types. For this reason, the mean values for sodium, chloride, and sulfate appear somewhat high.

Table 9 gives the estimated average intake of drinking water in liters per day for selected categories of various farm animals. Under the various elements are given three columns of values for illustrative purposes. One column expresses the National Research Council (1966, 1968a,b, 1970a, 1971a,b) daily requirement, the second column gives the approximate mean percentage of that requirement contributed in the water intake each day, and the third column lists the maximum percentage that the daily water intake would supply if the greatest observed concentration of the nutrient were present. No values are presented in Table 9 for percentages of the NRC requirement provided in water when minimum concentrations of nutrients were present, as in nearly all cases they were less than 1 percent.

TABLE 8 Composition of United States Surface Water, 1957-1969 (Collected at 140 Stations)

Substance	Mean	Maximum	Minimum	Number of Determinations
Phosphorus (mg/liter)	0.067	3.0	0.001	1,729

r) Magnesium salts had calcium chloride decreased (775 mg/liter) Sodium concentrations up to 10,650 mg/liter of sodium, 6,000 mg/liter of magnesium chloride caused growth at level of any salt during served among some rats

- 2 If animals are offered two sources of water, one highly saline and the other not, they will not drink the highly saline water
- 3 Animals can consume water of very high salinity for a few days without being harmed if they are then given water of low soluble salt content
- 4 As the soluble salts content of water increases, intake usually increases, except for water of extremely high saline content that the animals refuse to drink.
- 5 Abrupt change from water of low salinity to that of high salinity will probably cause more problems than gradual change
- 6 Depressed water intake is very likely to be accompanied by depressed feed intake. Thus, animals being fed for a high rate of gain or

TABLE 10 A Guide to the Use of Saline Waters for Livestock and Poultry

Total Soluble Salts Content of Waters (mg/liter)	Comment
Less than 1,000	These waters have a relatively low level of salinity and should present no serious burden to any class of livestock or poultry
1,000-2,999	These waters should be satisfactory for all classes of livestock and poultry. They may cause temporary and mild diarrhea in livestock not accustomed to them or watery droppings in poultry (especially at the higher levels), but should not affect their health or performance
3,000-4,999	These waters should be satisfactory for livestock, although they might very possibly cause temporary diarrhea if refused at first by animals not accustomed to them. They are poor waters for poultry, often causing watery feces and (at the higher levels of salinity) increased mortality and decreased growth, especially in turkeys.
5,000-6,999	These waters can be used with reasonable safety for dairy and beef cattle, sheep, swine, and horses. It may be well to avoid the use of those approaching the higher levels for pregnant or lactating animals. They are not acceptable waters for poultry, almost always causing some type of problem, especially near the upper limit, where reduced growth and production or increased mortality will probably occur.
7,000-10,000	These waters are unfit for poultry and probably for swine. Considerable risk may exist in using them for pregnant or lactating cows, horses, sheep, the young of these species or for any animals subjected to heavy heat stress or water loss. In general, their use should be avoided, although older ruminants, horses, and even poultry and swine may sustain on them for long periods of time under conditions of low stress.
More than 10,000	The risks with these highly saline waters are so great that they cannot be recommended for use under any conditions.

for Livestock and Poultry

ardous to livestock and poultry, especially due to build up in their tissues and products at levels undesirable to persons that consume them

Effects of various salts at high concentrations in water were discussed in regard to six species of farm animals. Water that contains less than 1,000 mg/liter of total dissolved salts should present no serious problems to any class of livestock or poultry. Water that contains 1,000-2,999 mg/liter should be satisfactory for all species of livestock and poultry in regard to performance, though some mild and temporary diarrhea may occur. When the water contains 3,000-4,999 mg/liter, it is of poor quality for poultry and at the higher levels may cause increased mortality and decreased growth. However, livestock should find this range of salinity satisfactory, especially when they become accustomed to it. Water in the range of 5,000-6,999 mg/liter can be used with reasonable safety for beef and dairy cattle, sheep, swine, and horses, although it is best to avoid higher levels for pregnant and lactating animals. Salinity in this range is not acceptable to poultry. In the range of 7,000-10,000 mg/liter of saline salts, the waters are unfit for poultry and probably for swine. They are a source of risk for pregnant and lactating cows, sheep, and horses, as well as for the young of these species and those subjected to heat stress. Waters that contain more than 10,000 mg/liter of saline salts involve sufficient risk that they probably should not be used.

Toxic blue-green algae were pointed out as a worldwide problem in drinking water for livestock. To date only one toxin has been reported as isolated and identified. It is a cyclic polypeptide containing 10 amino acid residues, one of which is the unnatural amino acid D-serine. The sudden decomposition of algal blooms often precedes mass mortality of fish and these decompositions have been associated with livestock poisonings. Predileth symptoms due to algal poison have not been well observed and postmortem examination is apparently of no help in diagnosis. In view of the many unknowns relating to toxic algae blooms, the use of drinking water with heavy growths should best be avoided.

Radionuclides occur in water from both natural and human sources. In general, the radioactivity of drinking water for livestock and poultry should be of no greater level than that recommended for human consumption by the U.S. Public Health Service.

Limited information on the effects of pesticides in water on economic animals and their products was presented and their potential hazards pointed out. Recommendations are given in Table 13 on limits of concentration of some potential toxic substances in drinking water for livestock and poultry.

Public Notice – Environmental Permit

PURPOSE OF NOTICE To seek public comment on a draft permit from the Department of Environmental Quality that will allow the release of treated and industrial wastewater into a water body in Culpeper County Virginia

PUBLIC COMMENT PERIOD June 22 2013 to July 22 2013

PERMIT NAME Virginia Pollutant Discharge Elimination System Permit – Wastewater issued by DEQ under the authority of the State Water Control Board

APPLICANT NAME ADDRESS AND PERMIT NUMBER Virginia Department of Corrections
12352 Coffeewood Drive Mitchells VA 22729
VA0087718

PROJECT DESCRIPTION The Virginia Department of Corrections has applied for a reissuance of a permit for the public Coffeewood Correctional Center The applicant proposes to release treated sewage wastewaters from correctional center and industrial wastewaters at a rate of 0.2 and 0.07 million gallons per day respectively into a water body Sludge from the treatment process will be disposed by landfill The facility proposes to release the treated sewage and industrial wastewaters in the Cabin Branch in Culpeper County in the Rappahannock watershed A watershed is the land area drained by a river and its incoming streams The permit will limit the following pollutants to amounts that protect water quality pH cBOD total suspended solids dissolved oxygen total kjeldahl nitrogen E coli copper zinc total dissolved solids and whole effluent toxicity

HOW TO COMMENT AND/OR REQUEST A PUBLIC HEARING DEQ accepts comments and requests for public hearing by hand-delivery e-mail fax or postal mail All comments and requests must be in writing and be received by DEQ during the comment period Submittals must include the names mailing addresses and telephone numbers of the commenter/requester and of all persons represented by the commenter/requester A request for public hearing must also include 1) The reason why a public hearing is requested 2) A brief informal statement regarding the nature and extent of the interest of the requester or of those represented by the requester including how and to what extent such interest would be directly and adversely affected by the permit 3) Specific references where possible to terms and conditions of the permit with suggested revisions A public hearing may be held including another comment period if public response is significant based on individual requests for a public hearing and there are substantial disputed issues relevant to the permit

CONTACT FOR PUBLIC COMMENTS DOCUMENT REQUESTS AND ADDITIONAL INFORMATION The public may review the draft permit and application at the DEQ-Northern Regional Office by appointment or may request electronic copies of the draft permit and fact sheet

AMENDMENT TO EXECUTIVE COMPLIANCE AGREEMENT

DEPARTMENT OF CORRECTIONS COFFEEWOOD CORRECTIONAL CENTER

For COFFEEWOOD WATER & SEWAGE TREATMENT PLANT (VPDES Permit No VA0087718)

This is an amendment to the Executive Compliance Agreement ("Agreement") entered into under the authority of Va Code § 62.1-14 and 10.1-1185 by the Department of Environmental Quality ("DEQ") and the Department of Corrections ("DOC") Coffeewood Correctional Center ("Coffeewood") on February 2, 2001 regarding the Coffeewood water treatment and sewage treatment plant for the purpose of revising certain provisions of the Agreement.

The Agreement provides a construction schedule for Coffeewood to combine discharges from water treatment outfall 002 and sewage treatment outfall 001 into one outfall and to locate that outfall on the Rapidan River where the River's flow provides sufficient dilution for the discharge to meet the Permit's whole effluent toxicity limit ("WET") and effluent limits for copper and zinc. The construction schedule requires that Coffeewood complete construction of the new outfall by August 31, 2002 but completion is contingent upon Coffeewood acquiring the necessary easements to gain access to the Rapidan River.

In a letter dated October 15, 2001, Coffeewood explained that the DOC is unable to acquire the necessary easements. In follow-up correspondence dated March 22, 2002, Coffeewood requested that the Agreement be amended to extend the construction schedule so that Coffeewood could develop and implement an alternative plan and schedule for achieving compliance with final Permit effluent limits.

To remedy these matters, the Department of Corrections, Coffeewood Correctional

Center and DEQ agree to the amended schedule of action in Appendix A and to Coffeewood's compliance with the interim limits provided in Appendices B and C Both DEQ and Coffeewood understand and agree that this amended Agreement does not alter, modify or amend any other provisions of the Agreement and the unmodified provisions of the Agreement remain in effect by their own terms

This amended Agreement shall become effective upon the date of its execution by the Director of the Department of Environmental Quality or his designee The Department of Corrections, Coffeewood Correctional Center agrees to be bound by any compliance dates in this amended Agreement which may predate its effective date

Ron Angelone Director

Date

**APPENDIX A
SCHEDULE OF COMPLIANCE**

The Department of Corrections Coffeewood Correctional Center shall

- 1 By July 1, 2002, submit for review a preliminary engineering report ("PER") to the DEQ Northern Virginia Regional Office ("NVRO") and to the Virginia Department of Health ("VDH") addressing alternatives for achieving compliance with final Permit effluent limits and recommending a preferred alternative and

- 2 By November 1 2002 submit to DEQ NVRO for review and approval a plan and schedule for implementing the alternative chosen by Coffeewood for achieving compliance with final Permit effluent limits. If the cost of the alternative chosen by Coffeewood exceeds the amount budgeted for the project, the schedule submitted pursuant to item two may provide for time needed to request additional funding from the Virginia General Assembly. Upon approval, the plan and schedule shall become a part of and enforceable under this Agreement.

APPENDIX C

INTERIM EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS

COFFEEWOOD WATER & WASTEWATER PLANT

During the period beginning with the effective date of this amended ECA and lasting until Coffeewood complies with the terms in Appendix A of this amended ECA, Coffeewood shall monitor and limit the discharge from outfall 002 in accordance with the VPDES Permit No. VA0087718, except as specified below. These interim limits shall retroactively apply, if applicable, as of the first day of the month in which this amended ECA becomes effective. These requirements shall be construed in light of the Board's Permit Regulation.

During
ECA,
These
shall t

PARAMETER	DISCHARGE LIMITATIONS			MONITORING REQUIREMENTS		
	Monthly Average	Weekly Average	Minimum	Maximum	Frequency	Sample Type
Chronic Whole Effluent Toxicity Limit (Tuc)	NA	NA	N/A	N/L	1/yr	5G/8 HC
N/A	= Not Applicable					
1/yr	= Once per year					
5G/8 HC	= An eight hour composite sample consisting of a minimum of five grab samples collected at hourly intervals until the discharge ceases or if the discharge is less than eight hours in duration, a minimum of five grab samples taken at evenly spaced intervals during the duration of the discharge					

N/L = No Limit

PAR/ Tot R Tot R

N/A 1/6M

APPENDIX B
INTERIM EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS

COFFEEWOOD WATER & WASTEWATER PLANT

During the period beginning with the effective date of this amended ECA and lasting until Coffeewood complies with the items in Appendix A of this amended ECA, Coffeewood shall monitor and limit the discharge from outfall 001 in accordance with the VPDES Permit No. VA0087718, except as specified below. These interim limits shall retroactively apply, if applicable, as of the first day of the month in which this amended ECA becomes effective. These requirements shall be construed in light of the Board's Permit Regulation.

PARAMETER	DISCHARGE LIMITATIONS			MONITORING REQUIREMENTS		
	Monthly Average	Weekly Average	Minimum	Maximum	Frequency	Sample Type
Tot Recov Copper (µg/l & g/d)	NL	NA	N/A	N/L	1/6M	Grab
Tot Recov Zinc (µg/l & g/d)	NL	NA	N/A	N/L	1/6M	Grab

N/A = Not Applicable
 1/6M = Once per six months
 N/L = No Limit

The permittee shall select an analysis level for total recoverable copper and zinc with a quantification level (QL) less than the Site Specific Target Value listed in Appendix A.

I B Permit/Facility Characteristics – cont.

	Yes	No	N/A
11 Has the facility substantially enlarged or altered its operation or substantially increased its flow or production?		X	
12 Are there any production-based, technology-based effluent limits in the permit?	X		
13 Do any water quality-based effluent limit calculations differ from the State's standard policies or procedures?		X	
14 Are any WQBELs based on an interpretation of narrative criteria?		X	
15 Does the permit incorporate any variances or other exceptions to the State's standards or regulations?	X		
16 Does the permit contain a compliance schedule for any limit or condition?		X	
17 Is there a potential impact to endangered/threatened species or their habitat by the facility's discharge(s)?	X		
18 Have impacts from the discharge(s) at downstream potable water supplies been evaluated?	X		
19 Is there any indication that there is significant public interest in the permit action proposed for this facility?		X	
20 Have previous permit, application, and fact sheet been examined?	X		

Part II NPDES Draft Permit Checklist

Region III NPDES Permit Quality Checklist – for POTWs
(To be completed and included in the record only for POTWs)

II A Permit Cover Page/Administration		Yes	No	N/A
1	Does the fact sheet or permit describe the physical location of the facility, including latitude and longitude (not necessarily on permit cover page)?	X		
2	Does the permit contain specific authorization to discharge information (from where to where, by whom)?	X		

II B Effluent Limits – General Elements		Yes	No	N/A
1	Does the fact sheet describe the basis of final limits in the permit (e.g., that a comparison of technology and water quality-based limits was performed, and the most stringent limit selected)?	X		
2	Does the fact sheet discuss whether “antibacksliding” provisions were met for any limits that are less stringent than those in the previous NPDES permit?			X

II C Technology-Based Effluent Limits (POTWs)		Yes	No	N/A
1	Does the permit contain numeric limits for <u>ALL</u> of the following BOD (or alternative, e.g., CBOD, COD, TOC), TSS, and pH?	X		
2	Does the permit require at least 85% removal for BOD (or BOD alternative) and TSS (or 65% for equivalent to secondary) consistent with 40 CFR Part 133?	X		
a	If no, does the record indicate that application of WQBELs, or some other means, results in more stringent requirements than 85% removal or that an exception consistent with 40 CFR 133.103 has been approved?			X
3	Are technology based permit limits expressed in the appropriate units of measure (e.g., concentration, mass, SU)?	X		
4	Are permit limits for BOD and TSS expressed in terms of both long term (e.g., average monthly) and short term (e.g., average weekly) limits?	X		
5	Are any concentration limitations in the permit less stringent than the secondary treatment requirements (30 mg/l BOD ₅ and TSS for a 30 day average and 45 mg/l BOD ₅ and TSS for a 7 day average)?		X	
a	If yes, does the record provide a justification (e.g., waste stabilization pond, trickling filter, etc.) for the alternate limitations?			X

II D Water Quality-Based Effluent Limits		Yes	No	N/A
1	Does the permit include appropriate limitations consistent with 40 CFR 122.44(d) covering State narrative and numeric criteria for water quality?	X		
2	Does the fact sheet indicate that any WQBELs were derived from a completed and EPA approved TMDL?	X		
3	Does the fact sheet provide effluent characteristics for each outfall?	X		
4	Does the fact sheet document that a “reasonable potential” evaluation was performed?	X		
a	If yes, does the fact sheet indicate that the ‘reasonable potential’ evaluation was performed in accordance with the State’s approved procedures?	X		
b	Does the fact sheet describe the basis for allowing or disallowing in-stream dilution or a mixing zone?	X		
c	Does the fact sheet present WLA calculation procedures for all pollutants that were found to have “reasonable potential”?	X		
d	Does the fact sheet indicate that the “reasonable potential” and WLA calculations accounted for contributions from upstream sources (i.e., do calculations include ambient/background concentrations)?		X	
e	Does the permit contain numeric effluent limits for all pollutants for which “reasonable potential” was determined?	X		

II D Water Quality-Based Effluent Limits – cont		Yes	No	N/A
5	Are all final WQBELs in the permit consistent with the justification and/or documentation provided in the fact sheet?	X		
6	For all final WQBELs, are BOTH long term AND short-term effluent limits established?	X		
7	Are WQBELs expressed in the permit using appropriate units of measure (e.g., mass, concentration)?	X		
8	Does the record indicate that an “antidegradation” review was performed in accordance with the State’s approved antidegradation policy?	X		

II E Monitoring and Reporting Requirements		Yes	No	N/A
1	Does the permit require at least annual monitoring for all limited parameters and other monitoring as required by State and Federal regulations?	X		
	a If no, does the fact sheet indicate that the facility applied for and was granted a monitoring waiver, AND, does the permit specifically incorporate this waiver?			
2	Does the permit identify the physical location where monitoring is to be performed for each outfall?		X	
3	Does the permit require at least annual influent monitoring for BOD (or BOD alternative) and TSS to assess compliance with applicable percent removal requirements?		X	
4	Does the permit require testing for Whole Effluent Toxicity?		X	

II F Special Conditions		Yes	No	N/A
1	Does the permit include appropriate biosolids use/disposal requirements?	X		
2	Does the permit include appropriate storm water program requirements?			X

II F Special Conditions – cont		Yes	No	N/A
3	If the permit contains compliance schedule(s), are they consistent with statutory and regulatory deadlines and requirements?			X
4	Are other special conditions (e.g., ambient sampling, mixing studies, TIE/TRE, BMPs, special studies) consistent with CWA and NPDES regulations?			X
5	Does the permit allow/authorize discharge of sanitary sewage from points other than the POTW outfall(s) or CSO outfalls [e.g., Sanitary Sewer Overflows (SSOs) or treatment plant bypasses]?		X	
6	Does the permit authorize discharges from Combined Sewer Overflows (CSOs)?		X	
	a Does the permit require implementation of the “Nine Minimum Controls”?			X
	b Does the permit require development and implementation of a “Long Term Control Plan”?			X
	c Does the permit require monitoring and reporting for CSO events?			X
7	Does the permit include appropriate Pretreatment Program requirements?		X	

II G Standard Conditions		Yes	No	N/A
1	Does the permit contain all 40 CFR 122.41 standard conditions or the State equivalent (or more stringent) conditions?	X		
List of Standard Conditions – 40 CFR 122.41				
Duty to comply		Property rights		
Duty to reapply		Duty to provide information		
Need to halt or reduce activity not a defense		Inspections and entry		
Duty to mitigate		Monitoring and records		
Proper O & M		Signatory requirement		
Permit actions		Bypass		
		Upset		
		Reporting Requirements		
		Planned change		
		Anticipated noncompliance		
		Transfers		
		Monitoring reports		
		Compliance schedules		
		24-Hour reporting		
		Other non-compliance		
2	Does the permit contain the additional standard condition (or the State equivalent or more stringent conditions) for POTWs regarding notification of new introduction of pollutants and new industrial users [40 CFR 122.42(b)]?	X		

Part II NPDES Draft Permit Checklist

Region III NPDES Permit Quality Review Checklist – For Non-Municipals
(To be completed and included in the record for all non-POTWs)

II A Permit Cover Page/Administration

	Yes	No	N/A
1 Does the fact sheet or permit describe the physical location of the facility, including latitude and longitude (not necessarily on permit cover page)?	X		
2 Does the permit contain specific authorization to-discharge information (from where to where, by whom)?	X		

II B Effluent Limits – General Elements

	Yes	No	N/A
1 Does the fact sheet describe the basis of final limits in the permit (e g , that a comparison of technology and water quality-based limits was performed, and the most stringent limit selected)?	X		
2 Does the fact sheet discuss whether “antibacksliding” provisions were met for any limits that are less stringent than those in the previous NPDES permit?			X

II C Technology-Based Effluent Limits (Effluent Guidelines & BPJ)

	Yes	No	N/A
1 Is the facility subject to a national effluent limitations guideline (ELG)?		X	
a If yes, does the record adequately document the categorization process, including an evaluation of whether the facility is a new source or an existing source?			X
b If no, does the record indicate that a technology based analysis based on Best Professional Judgement (BPJ) was used for all pollutants of concern discharged at treatable concentrations?	X		
2 For all limits developed based on BPJ, does the record indicate that the limits are consistent with the criteria established at 40 CFR 125 3(d)?	X		
3 Does the fact sheet adequately document the calculations used to develop both ELG and /or BPJ technology based effluent limits?		X	
4 For all limits that are based on production or flow, does the record indicate that the calculations are based on a “reasonable measure of ACTUAL production” for the facility (not design)?			X
5 Does the permit contain “tiered” limits that reflect projected increases in production or flow?		X	
a If yes, does the permit require the facility to notify the permitting authority when alternate levels of production or flow are attained?			X
6 Are technology-based permit limits expressed in appropriate units of measure (e g , concentration, mass, SU)?	X		
7 Are all technology based limits expressed in terms of both maximum daily, weekly average, and/or monthly average limits?		X	
8 Are any final limits less stringent than required by applicable effluent limitations guidelines or BPJ?		X	

II D Water Quality-Based Effluent Limits

	Yes	No	N/A
1 Does the permit include appropriate limitations consistent with 40 CFR 122 44(d) covering State narrative and numeric criteria for water quality?	X		
2 Does the record indicate that any WQBELs were derived from a completed and EPA approved TMDL?			X
3 Does the fact sheet provide effluent characteristics for each outfall?	X		
4 Does the fact sheet document that a ‘reasonable potential’ evaluation was performed?	X		
a If yes, does the fact sheet indicate that the ‘reasonable potential’ evaluation was performed in accordance with the State’s approved procedures?	X		
b Does the fact sheet describe the basis for allowing or disallowing in-stream dilution or a mixing zone?	X		

II D Water Quality-Based Effluent Limits – cont

	Yes	No	N/A
c Does the fact sheet present WLA calculation procedures for all pollutants that were found to have “reasonable potential”?			X
d Does the fact sheet indicate that the “reasonable potential” and WLA calculations accounted for contributions from upstream sources (i.e., do calculations include ambient/background concentrations where data are available)?			X
e Does the permit contain numeric effluent limits for all pollutants for which “reasonable potential” was determined?			X
5 Are all final QBELs in the permit consistent with the justification and/or documentation provided in the fact sheet?			X
6 For all final QBELs, are BOTH long term (e.g., average monthly) AND short-term (e.g., maximum daily, weekly average, instantaneous) effluent limits established?			X
7 Are QBELs expressed in the permit using appropriate units of measure (e.g., mass, concentration)?			X
8 Does the fact sheet indicate that an “antidegradation” review was performed in accordance with the State’s approved antidegradation policy?	X		

II E Monitoring and Reporting Requirements

	Yes	No	N/A
1 Does the permit require at least annual monitoring for all limited parameters?	X		
a If no, does the fact sheet indicate that the facility applied for and was granted a monitoring waiver AND, does the permit specifically incorporate this waiver?			
2 Does the permit identify the physical location where monitoring is to be performed for each outfall?		X	
3 Does the permit require testing for Whole Effluent Toxicity in accordance with the State’s standard practices?	X		

II F Special Conditions

	Yes	No	N/A
1 Does the permit require development and implementation of a Best Management Practices (BMP) plan or site specific BMPs?		X	
a If yes, does the permit adequately incorporate and require compliance with the BMPs?			X
2 If the permit contains compliance schedule(s), are they consistent with statutory and regulatory deadlines and requirements?		X	
3 Are other special conditions (e.g., ambient sampling, mixing studies, TIE/TRE, BMPs, special studies) consistent with CWA and NPDES regulations?			X

II G Standard Conditions

	Yes	No	N/A
1 Does the permit contain all 40 CFR 122.41 standard conditions or the State equivalent (or more stringent) conditions?	X		
List of Standard Conditions – 40 CFR 122.41			
Duty to comply	Property rights	Reporting Requirements	
Duty to reapply	Duty to provide information	Planned change	
Need to halt or reduce activity not a defense	Inspections and entry	Anticipated noncompliance	
Duty to mitigate	Monitoring and records	Transfers	
Proper O & M	Signatory requirement	Monitoring reports	
Permit actions	Bypass	Compliance schedules	
	Upset	24-Hour reporting	
		Other non compliance	
2 Does the permit contain the additional standard condition (or the State equivalent or more stringent conditions) for existing non municipal dischargers regarding pollutant notification levels [40 CFR 122.42(a)]?	X		

Part III Signature Page

Based on a review of the data and other information submitted by the permit applicant, and the draft permit and other administrative records generated by the Department/Division and/or made available to the Department/Division, the information provided on this checklist is accurate and complete, to the best of my knowledge
